

$$\prod_{i=0}^{i < n} \left[x \cos\left(\frac{i\pi}{n}\right) + y \sin\left(\frac{i\pi}{n}\right) \right] - z = 0$$

Für $n = 3$ gilt

$$\left[x \cos\left(\frac{0\pi}{3}\right) + y \sin\left(\frac{0\pi}{3}\right) \right] \left[x \cos\left(\frac{1\pi}{3}\right) + y \sin\left(\frac{1\pi}{3}\right) \right] \left[x \cos\left(\frac{2\pi}{3}\right) + y \sin\left(\frac{2\pi}{3}\right) \right] - z = 0$$

Mit

$$\cos\left(\frac{0\pi}{3}\right) = \cos(0^\circ) = 1$$

$$\sin\left(\frac{0\pi}{3}\right) = \sin(0^\circ) = 0$$

$$\cos\left(\frac{1\pi}{3}\right) = \cos(60^\circ) = \frac{1}{2} \quad \text{und} \quad \sin\left(\frac{1\pi}{3}\right) = \sin(60^\circ) = \frac{\sqrt{3}}{2}$$

$$\cos\left(\frac{2\pi}{3}\right) = \cos(120^\circ) = -\frac{1}{2} \quad \sin\left(\frac{2\pi}{3}\right) = \sin(120^\circ) = \frac{\sqrt{3}}{2}$$

erhalten wir

$$x \left[\frac{1}{2}x + \frac{\sqrt{3}}{2}y \right] \left[-\frac{1}{2}x + \frac{\sqrt{3}}{2}y \right] - z = 0$$

Multiplizieren wir die beiden Klammern aus.

$$\left[\frac{1}{2}x + \frac{\sqrt{3}}{2}y \right] \left[-\frac{1}{2}x + \frac{\sqrt{3}}{2}y \right] = -\frac{1}{4}x^2 + \frac{\sqrt{3}}{4}xy - \frac{\sqrt{3}}{4}xy + \frac{3}{4}y^2 = -\frac{1}{4}x^2 + \frac{3}{4}y^2$$

Damit erhält man für $n = 3$

$$x \left[-\frac{1}{4}x^2 + \frac{3}{4}y^2 \right] - z = 0$$

Das Ergebnis der Formel.
